DETAILED ACTION

This is a first office action for application Serial No. 10/089,727 which is a continuation of application Serial No. PCT/AU00/01209 filed October 5, 2000.

Abstract Objection

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it contains words less than 50.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5 and 7-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Codd (US Patent No., 4,704,836).

Codd teaches a longitudinal tube comprising a crushed region (13) on opposed portions of an end of the tube which are crushed together to abut each other to define a flat land (13) to be

capable to receive a fixing element (17), and a longitudinally extending non-crushed regions (14) located laterally either side of the crushed region to define ribs/sub-tubes (12) on lateral sides of the crushed region.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Codd '214, Johnson, Jr. '083, Johnson, Jr. '176 ,Codd '795, Romanelli'160, French Patent No. 2,585,417 and UK patent No. 2,215,752 teach various tubular beams having crushed region and non-crushed region as claimed.
